

Rotational/Translational Increments of Bitter Almond odorants Contribute to Odor*
Calculated by Molecular Modeling Flavor Pro

Odorant	Rotational Increment
HCN	0.060
Benzaldehyde	0.059
Nitrobenzene	0.066
Benzonitrile	0.071
Mandelonitrile	0.066

***This table illustrates the similarity of rotational/translational increments (RT factors) for various odorants all described as having bitter almond character.**
